Seamless capsules with
improved drug compliance

OMETHYL CUTIELET 2g

Omega-3, easy to swallow

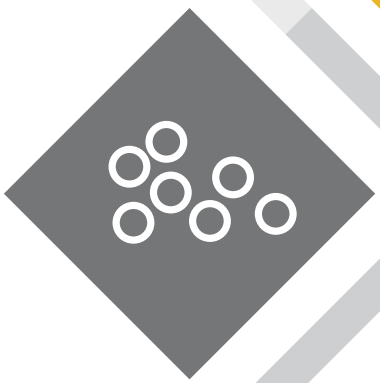
OMETHYL CUTIELET

Omega-3-acid ethyl esters 90 2g

OMETHYL CUTIELET is South Korea's first Omega-3 2g medication composed of small capsules with drug compliance and stability

OMETHYL CUTIELET is easier to swallow and has less fishy smell compared to conventional Omega-3 products by minimized capsule size[1)]

OMETHYL CUTIELET is manufactured with domestic active ingredients which are refined and processed from high purity ingredients extracted from Peruvian and Chilean anchovy[2)]

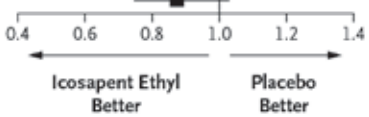


OMETHYL CUTIELET has improved stability and feeling of irritation significantly with seamless technology

1) Catalent Consumer health
2) KUP Research & development

OMETHYL CUTIELET is the first Omega-3 2g soft capsule in South Korea. Recent clinical study highly recommends the daily dose of Omega-3 4g[3)]

End Point	Icosapent Ethyl (N=4089)	Placebo (N=4090)	Hazard Ratio (95% CI)	P Value
	no. of patients with event (%)			
Primary composite	705 (17.2)	901 (22.0)	0.75 (0.68–0.83)	<0.001
Key secondary composite	459 (11.2)	606 (14.8)	0.74 (0.65–0.83)	<0.001
Cardiovascular death or nonfatal myocardial infarction	392 (9.6)	507 (12.4)	0.75 (0.66–0.86)	<0.001
Fatal or nonfatal myocardial infarction	250 (6.1)	355 (8.7)	0.69 (0.58–0.81)	<0.001
Urgent or emergency revascularization	216 (5.3)	321 (7.8)	0.65 (0.55–0.78)	<0.001
Cardiovascular death	174 (4.3)	213 (5.2)	0.80 (0.66–0.98)	0.03
Hospitalization for unstable angina	108 (2.6)	157 (3.8)	0.68 (0.53–0.87)	0.002
Fatal or nonfatal stroke	98 (2.4)	134 (3.3)	0.72 (0.55–0.93)	0.01
Death from any cause, nonfatal myocardial infarction, or nonfatal stroke	549 (13.4)	690 (16.9)	0.77 (0.69–0.86)	<0.001
Death from any cause	274 (6.7)	310 (7.6)	0.87 (0.74–1.02)	—



Subject	8,175 patients (TG 135~499mg/dl) with either cardiovascular disease or diabetes together with other risk factors
Method	Patients were randomly administered with either icosapent ethyl 4g/day (n=4,089) or placebo (n=4,090), and closely monitored for 4.9 years on average
Result	The placebo group showed 22.0% incidence rate of cardiovascular disease, while the icosapent ethyl group showed 17.2% incidence rate of cardiovascular disease (HR, 0.75; p<0.001)
Conclusion	Among patients with elevated triglyceride levels who were receiving statin therapy, the risk of major ischemic events, including cardiovascular death, was significantly lower with 2 g of icosapent ethyl twice daily (total daily dose, 4 g) than with placebo.

OMETHYL CUTIELET has proven its equivalence with existing soft capsules through a BE study[4)]

EPA : Eicosapentanoic acid
DHA : Docohexanoic acid

Omega-3, easy to swallow

OMETHYL CUTIELET

Omega-3-acid ethyl esters 90 2g

Drug Information

PRODUCT NAME	OMETHYL CUTIELET Soft Cap.
COMPOSITION	Each pouch contains Omega-3-Acid Ethyl Esters 90------2 g
DESCRIPTION	Transparent, spherical soft capsules filled with pale yellow oil in aluminium foil pouch
INDICATIONS	Omethyl Cutielet is indicated as an adjunct to diet to reduce triglyceride levels in patients with the following endogenous hypertriglyceridaemia 1) hypertriglyceridaemia (type IV) in monotherapy, 2) hypercholesterolemia and hypertriglyceridaemia (type IIb) in combination with statins 3) hypercholesterolemia and hypertriglyceridaemia (type IIb) in combination with statins, when control of triglycerides is insufficient.
DOSAGE & ADMINISTRATION	Patients should be placed on an appropriate lipid-lowering diet before receiving this drug, and should continue this diet during treatment with this drug. This drug may be taken with food to avoid gastrointestinal disturbances.
Hypertriglyceridaemia	The usual starting dose is 2g per day and it may be increased up to 4g per day if necessary. It is administered once or twice a day.
